

MECHANICAL PUMPS

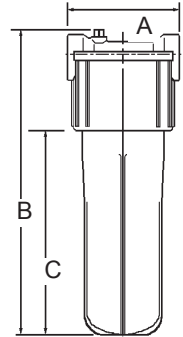

Intake *VISI*[®]-TRAPS, NEW

VISI[®] TRAP

The Visi Trap features a transparent sump which contains a filter element that traps foreign particles and vapors to protect the pump from corrosion and reduce oil backstreaming. Easily tailored to user requirements, two sizes (inquire about 4.5") and a variety of filtration and termination (flanges) options are available.

Key Features

- Can be mounted horizontally or vertically.
- Protects vacuum pumps from foreign materials.
- Transparent sump for visual monitoring.
- Select filter elements for trapping particles, water, oil or corrosive chemicals.
- Filter elements can be easily changed without breaking down the vacuum system.
