

VACUUM GAUGES

Battery Operated TC Controllers - NEW

The Model BOB-531 is designed specifically for use in gas-discharge applications. Because it is battery operated, it is isolated from high voltage discharge bombing. This makes it virtually immune to damage. The BOB-531 uses the popular DST-531 Thermocouple Tube and has a digital display scaled from 1 to 1999 microns.

It is housed in a non-conductive slanted plastic case with large (0.7" high) LCD digits for easy viewing. It is compatible with standard or rechargeable "D" batteries. *(Batteries Not Included)*

BOB-531
